Hydraulic motors type MTK...HD series 2

INTRODUCTION

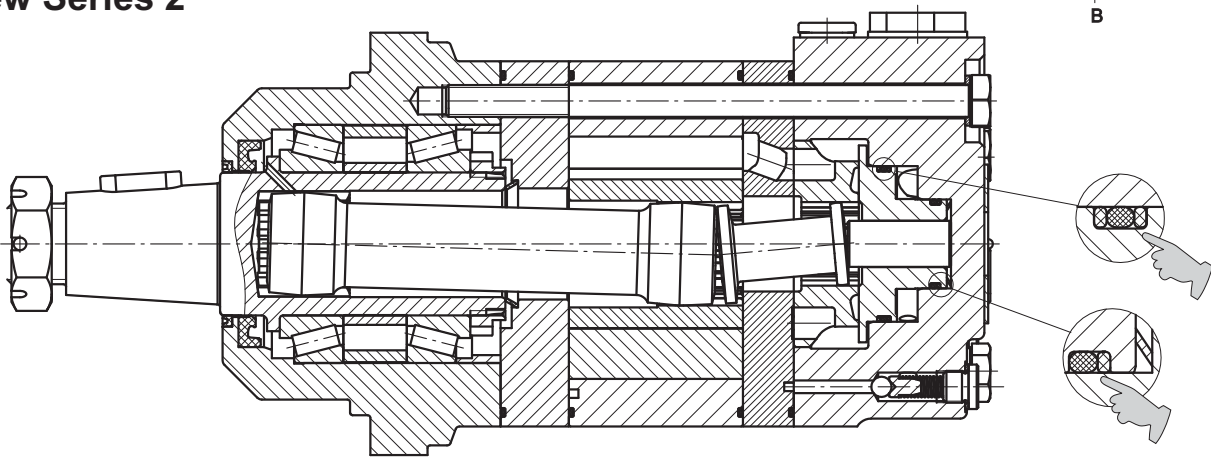

M+S Hydraulic introduces the new hydraulic motor MTK...HD series 2 with reinforced components designed to withstand high torques produced by frequent reversing

The main advantages of the new series are:

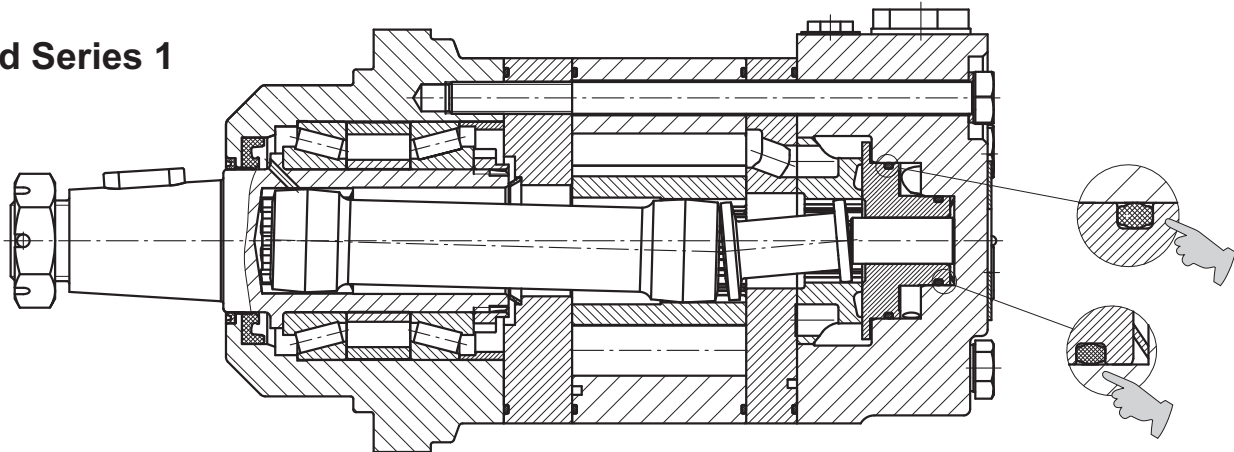

1. Easier assembly.
2. Preventing repair errors.

New Series 2

Old Series 1

The reinforced MTK...HD series 2 motors deviate from MTK...HD series 1 on the following points:

1. In order to protect the O-ring during the high pressure peaks, the balance plate has been provided with a new seal construction.
2. A drain line should always be used in case of valve absence!

The main technical features correspond to the standard motors MTK.

There are no changes in the overall and mounting dimensions of the new series of motors.

For detailed technical and mounting data please refer to M+S catalogue.
